Detail Proposal for the Propject

Team Name: - UWU Mind Blender

University: - Uva Wellassa University

Project Title: - Baby Mirror

Problem definition analysis and the Solution: -

Everyone knows that in the modern world people are very busy. Therefore, it is difficult for mothers to take care of their children. So, we are planning to develop a device to concentrate children. And also, mother can monitor the child what he/she is doing at the moment and analyze the child's education level, thinking capacity (age group 2-5). We intend to use IoT for this device. Mother can monitor the child through mobile app. The device connects to the mobile app via IoT.
